## Guidelines

---

---

[Code of Conduct](#)[Flowcharts](#)**Guidelines**[International standards for editors and authors](#)[eLearning](#)[Discussion Documents](#)[COPE Digest](#)[Seminars](#)[COPE Research Grant](#)[Resources and Further Reading](#)

# www.publicationethics.org

Other than the [Code of Conduct and Best Practice Guidelines for Journal Editors](#) (PDF, 298 kb) and [Code of Conduct for Journal Publishers](#) (PDF, 38 kb), COPE has written guidelines on the following:

### **Sharing of Information Among Editors-in-Chief Regarding Possible Misconduct**

These guidelines have been issued following a COPE Discussion Forum (4 September 2013, <http://tinyurl.com/pn43bxk>) and Discussion Document (February 2014, <http://tinyurl.com/lqag4uh>) on the subject, and it was initiated in the wake of a number of high-profile cases of research misconduct in which the sharing of information between the relevant editors-in-chief (EICs) was crucial to the final settlement of the cases. [Download PDF \(136 KB\)](#) © 2015 COPE

### **Text recycling guidelines for editors**

A common issue encountered by editors is overlap of text with an author's own previously published work, particularly with the increasing use of plagiarism detection software. This section is based on [COPE's text recycling guidelines](#) (also sometimes referred to as [self-plagiarism](#)).

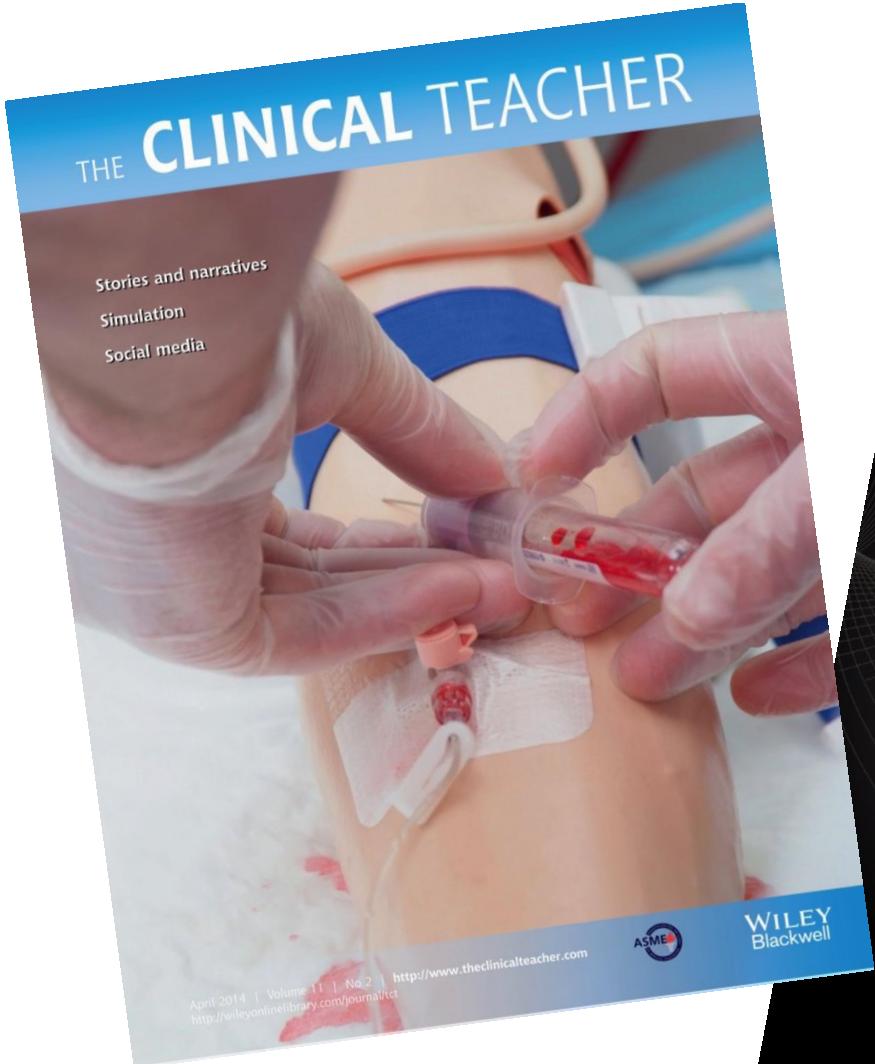

**Sharing of Information Among Editors-in-Chief Regarding Possible Misconduct (March 2015)**

Major Revision

Reject (or ‘Unsubmit’)

# Letter Authors Interests Ethics Overlap Format

**req Competing interests:** A competing interest exists when professional judgment concerning a publication (e.g. the safety of patients' welfare or the validity of research) may be influenced by financial gain, personal relationships or professional rivalry):

NIL

**req Ethical approval:** Ethical issues for any study involving human subjects must be addressed. Authors must declare whether they have obtained ethical approval or exemption from their institutional review board or independent committee and if so, to whom it was granted and if the study was exempted from requiring formal ethical approval. If no ethical approval is required, please state that the study was exempted from requiring formal ethical approval. If you are unable to provide a formal declaration, please provide a statement confirming that the standards of the Declaration of Helsinki were followed.

Not applicable

Report complete. [View the Originality Report.](#)

# Common reasons for early rejection

Ethical issues / lacks appropriate permissions

Doesn't comply with guidelines for authors

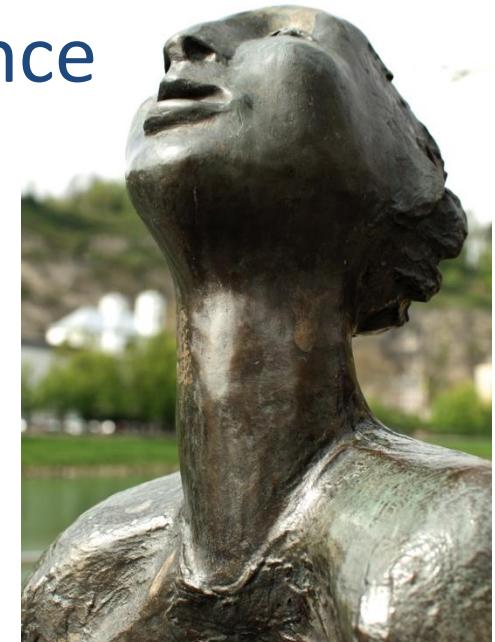

Poor fit / not aimed at target audience

Incomprehensible

Doesn't add to the literature

Serious methodological issues

Not aligned / unsupported claims

# Ethical issues of concern

(Potential ethical issues not adequately discussed)

Lacks participant consent for data collection

Data collected as evaluation, no consent to publish

No attempt to seek ethical approval or opinion

Lacks institutional permission

Concerns about fairness, assessment, harm, etc

Concerns about authorship / duplication / interests

## Research ethics and permission

Ethical issues are, by nature, complex and multifaceted. Whereas most of us always want to behave ethically, when we become very focused on one aspect of our work it may be difficult to step back and take a broad overview, and remain confident that our intended actions would be considered ethical and appropriate by others. This is compounded when there are potential conflicts of interest, for example pressures from employers and funding bodies. Ethics committees exist precisely for these reasons, as does the Declaration of Helsinki.<sup>1</sup> The declaration is a set of principles that emphasises the need to carefully consider in advance the ethical issues of any medical research, including consent, confidentiality, the weighing-up of potential benefits and risks, and independence from personal or financial interests, and then to submit research proposals for independent review by an ethics committee. The principles have been substantially embedded into medical and allied health care education, and it is now virtually unthinkable to conduct research involving patients without adhering to these principles. Unfortunately, we cannot yet say the same for educational research involving health care students and trainees.

Two years ago, *The Clinical Teacher* published an editorial

© 2014 John Wiley & Sons Ltd. THE CLINICAL TEACHER 2014; 11: 495–496 495

outlining the journal's expectations regarding ethical approval for submitted manuscripts, along with other aspects of publication ethics such as authorship and plagiarism.<sup>2</sup> Our expectations draw heavily on the Declaration of Helsinki, and also on guidance from the Committee on Publication Ethics,<sup>3</sup> our publisher, Wiley,<sup>4</sup> the British Educational Research Association,<sup>5</sup> and the academic literature. Firstly, we expect manuscripts to describe ethically justified research or evaluation. Ethicists and colleagues highlight that such research is able to generate valuable knowledge through valid research design, demonstrates respect for participants with informed consent, maximises potential benefits and minimises risk for participants and society, and treats participants equitably.<sup>6</sup> We expect similar standards for the design of evaluation studies if data are to be submitted for publication. Secondly, we expect authors to carefully reflect on the potential ethical issues related to their research or evaluation, including the need for verbal or written informed consent, and the potential for coercion in dependent relationships (e.g. between a teacher and a student). New researchers will find books on research methodology, such as those by Merriam or Cousin,<sup>7</sup> helpful in explaining the features

of ethical and trustworthy research.<sup>7,8</sup> Cousin also reminds us that 'An ethical orientation supports the thoughtful conduct of the research process and the eventual credibility of the report...[and] should never be viewed as a tiresome preliminary to the real business of research'.<sup>9</sup> Thirdly, we expect authors to submit their research proposals for formal ethics committee review and institutional approval from the medical school, hospital or training programme, where appropriate, including proposals to reanalyse or publish evaluation or assessment data that have already been collected for educational purposes. We recognise, however, that in some situations clinical educators may not have access to a formal ethics committee, and so an opinion on the proposed research from a senior colleague who is independent of the study may be appropriate. Finally, we expect authors to document the ethical issues considered, and to provide evidence for ethical or institutional approval, in their submission to *The Clinical Teacher*.

When authors submit a manuscript to *The Clinical Teacher*, they must complete a free-text box about ethical issues, which states:

'Ethical issues for any study involving human subjects should

1. Ethically-justified research design (appropriate and valid study design, conducted ethically)
2. Authors reflected on potential ethical issues
3. Authors submitted proposal for ethical and institutional approval or opinion as appropriate
4. Ethical issues and permissions documented

TCT - Dec 2014 Editorial

# Ethical approval: good responses

Careful consideration of potential ethical issues  
(consent, confidentiality, equity, risk/benefit...)

Detail of how ensured research was conducted  
ethically – e.g. procedure for participant consent

Independent ethical approval or opinion

Institutional (managerial) approval or opinion

# Ethical approval: poor responses

“Not applicable” or “n/a”

“No human subjects”

“Project was evaluation rather than research”

# Duplicate publication & ‘salami slicing’

Content of one paper overlaps substantially with another

Authors sign a declaration

All papers submitted through CrossCheck software

ICMJE defines ‘substantially’ as >10%, but varies by journal

Conference abstracts are generally acceptable, but should

be referenced if published

If in any doubt, reference +/- submit the original

# Copying and / or fabricating material

Can be accidental or deliberate

Any aspects of results, methods, institutional or  
ethical approval, author contributions, etc

Generally considered as misconduct +/- fraudulent

Strong imperative to inform author's institution if  
serious, and author may be 'blacklisted'

Can be career-ending

# Conflicts of Interest

Author has ties to activities which could  
inappropriately influence their judgement  
Irrespective of whether judgement is affected  
Similar issues for reviewers and editors  
If in doubt, declare it!

# Strategy for ethical education research

# Strategy for ethical education research

Understand / apply principles of ethically-justified research

Plan ahead, or as soon as think may want to publish data

Carefully consider & document potential ethical issues

Seek approval / independent opinion on plan and issues

Provide details of issues, approval and research methods

THE UNIVERSITY *of* EDINBURGH
