Assessment

Biggs, SRHE (1999)

Miller, Acad Med (1990)

Wass & Jones, Lancet (2001)

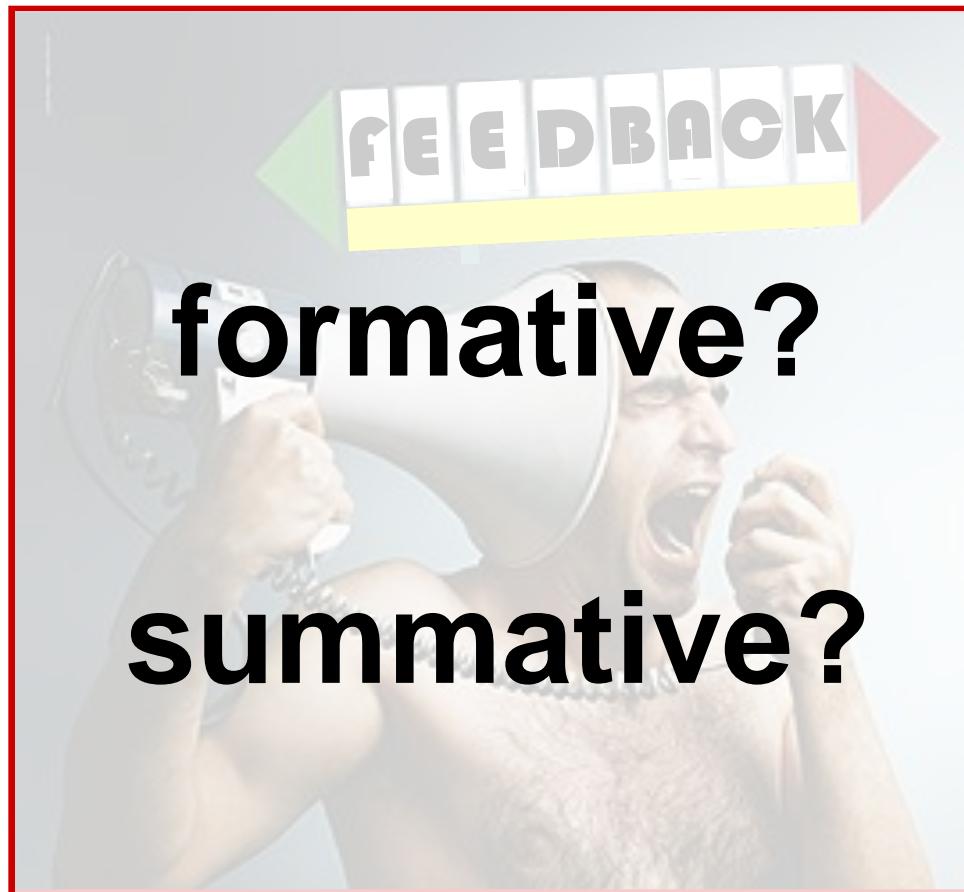

OSCE – design decisions

formative / summative

OSCE – design decisions

formative / summative

OSCE – design decisions compensatory / non-compensatory

knock-out stations?

compensatory?

Newble, Med Educ (2004)

Muijtiens & von der Vleuten, Eur J Dent Educ (2009)

Chesser & Heyes, Med Educ (2004)

Friedman Ben-David, AMEE (2000)

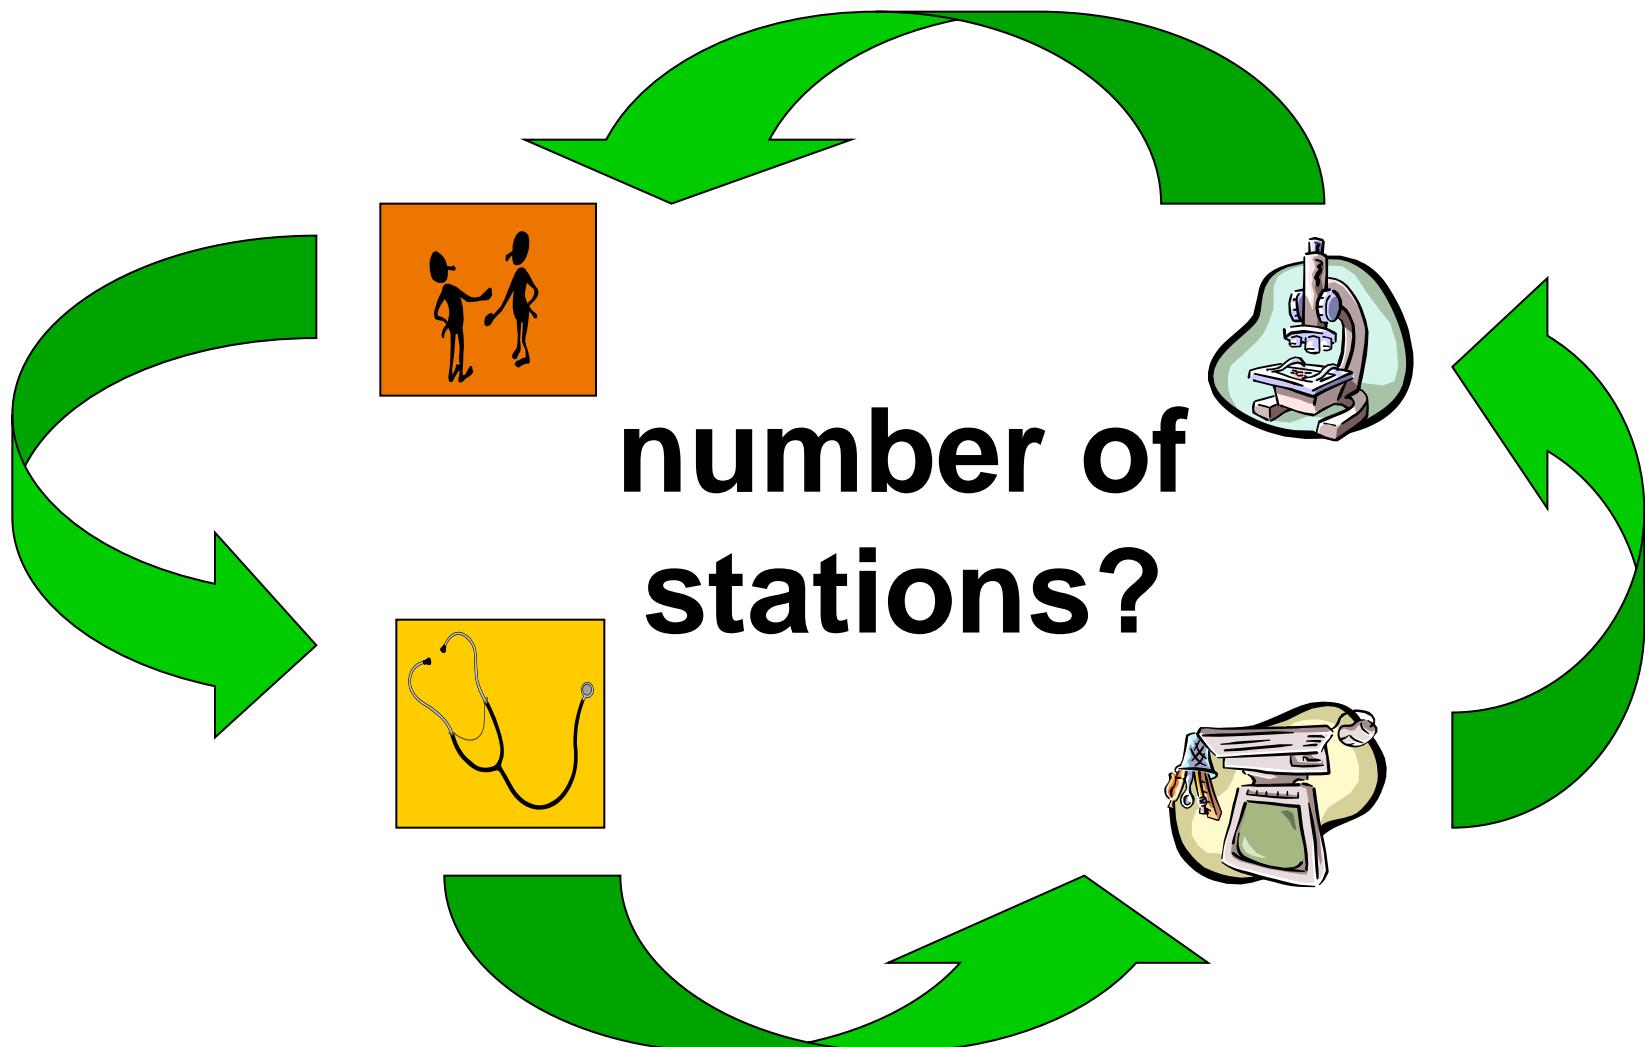

OSCE – design decisions

feedback at single stations

OSCE – design decisions

number of stations

OSCE – design decisions

number of stations

- University of Dundee, Scotland:
25 – 35 stations à 4½ minutes (Davis, 2003)
- Medical Council, Canada:
20 stationens à 10 minutes (Reznick et al., 1996)
- Harvard Medical School, USA:
16 stationens à 9 minutes (Hamann et al., 2002)
- ACGME & ABMS, USA:
14 – 18 stationens à 10 – 15 minutes (Swanson et al., 2002)

OSCE – design decisions

number of stations

Test Length Hours	One examiner per station	number of stations
1	0.34	4
2	0.51	8
4	0.67	12
6	0.76	16
8	0.81	20

OSCE – design decisions checklists / global rating scales

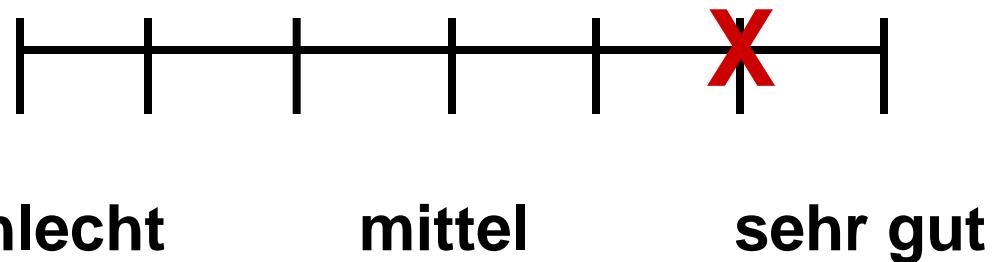

Checkliste

 -

→ 6 Punkte

Globale Bewertung

→ 6 Punkte

OSCE – design decisions

checklists / global rating scales

checklist vs. global rating scale

OSCE – design decisions

checklists / global rating scales

checklist vs. global rating scale

- higher interrater-reliability for checklists when assessing procedural technical skills (**0.9 vs. 0.7**)

Lund & Nikendei, Plos One (2012)

OSCE – design decisions

checklists / global rating scales

checklist vs. global rating scale

- higher interrater-reliability for checklists when assessing procedural technical skills (**0.9 vs. 0.7**)

Lund & Nikendei, Plos One (2012)

- global rating scale better captures interactive competencies

Van der Vleuten & de Graaff, Med Educ (1991)
Noraman & de Graaff, Med Educ (1991)

OSCE – design decisions

checklists / global rating scales

checklist vs. global rating scale

- higher interrater-reliability for checklists when assessing procedural technical skills (**0.9 vs. 0.7**)

Lund & Nikendei, Plos One (2012)

- global rating scale better captures interactive competencies

Van der Vleuten & de Graaff, Med Educ (1991)
Noraman & de Graaff, Med Educ (1991)

- combination of both formats is suggested

Newble, Med Educ (2004)

OSCE – design decisions

checklists / global rating scales

checklist vs. global rating scale

- higher interrater-reliability for checklists when assessing procedural technical skills (**0.9 vs. 0.7**)

Lund & Nikendei, Plos One (2012)

- global rating scale better captures interactive competencies

Van der Vleuten & de Graaff, Med Educ (1991)
Noraman & de Graaff, Med Educ (1991)

- combination of both formats is suggested

Newble, Med Educ (2004)

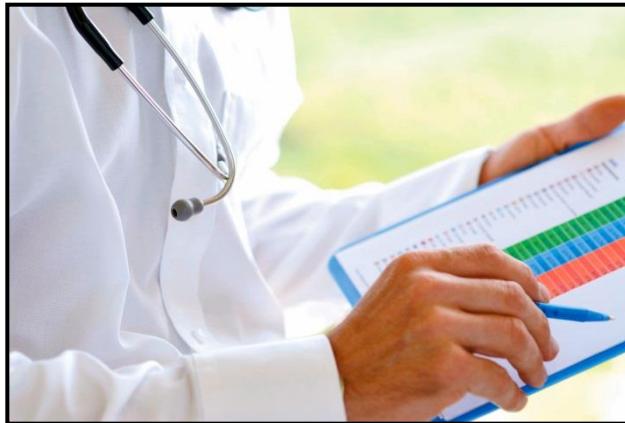

- high number of items decreases reliability

Schmidt & Boshuizen, Acad Med (1998)
Wilkinson & Egan, Acad Med (2003)

Pre-OSCE quality assurance

review of checklists

Name der OSCE-Station:	Autor:
	Reviewer:

Inhaltliche Kriterien:			
Schwierigkeitsgrad der OSCE-Station insgesamt	<input type="checkbox"/> leicht	<input type="checkbox"/> mittel	<input type="checkbox"/> schwer
Schwierigkeitsgrad der Unterfragen	<input type="checkbox"/> leicht	<input type="checkbox"/> mittel	<input type="checkbox"/> schwer
Fachliche Relevanz des Themas für die Zielgruppe	<input type="checkbox"/> vorhanden	<input type="checkbox"/> bedingt vorhanden	<input type="checkbox"/> nicht vorhanden
Anwendungsbezug	<input type="checkbox"/> hoch	<input type="checkbox"/> mittel	<input type="checkbox"/> gering
Klinische Fallvignette vorhanden	<input type="checkbox"/> ja	<input type="checkbox"/> nein	
An dieser Station werden folgende Teile geprüft:	Bitte Prozent-Angaben:		
Kommunikative Fähigkeiten:	%		
Praktische Fähigkeiten:	%		
Entscheidungs-Wissen:	%		
Fakten-Wissen:	%		
Wieviel Prozent der Aufgaben könnten auch schriftlich geprüft werden?	%

---	----------	----------	----------	----------	----------

Pre-OSCE quality assurance

standard setting

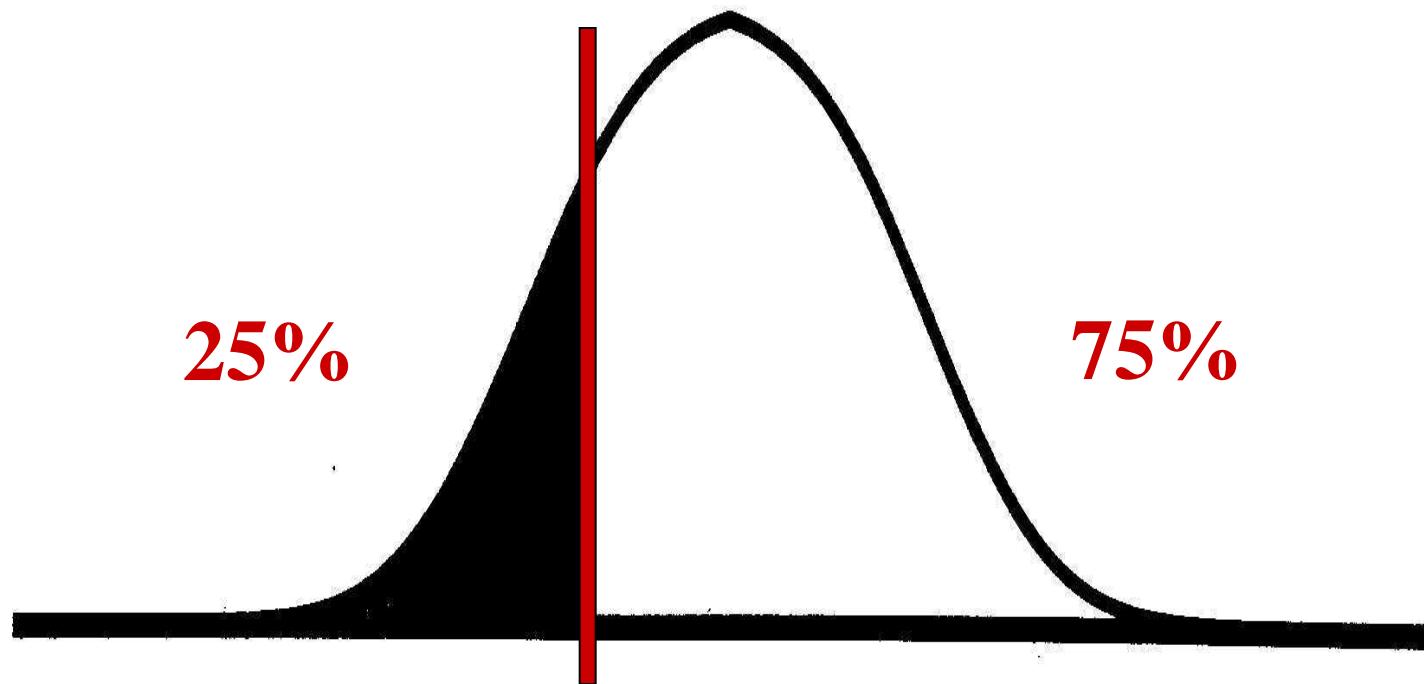

Different methods of standard setting

- holistic method
- relative, norm-orientated methods
- absolute, criteria-orientated methods

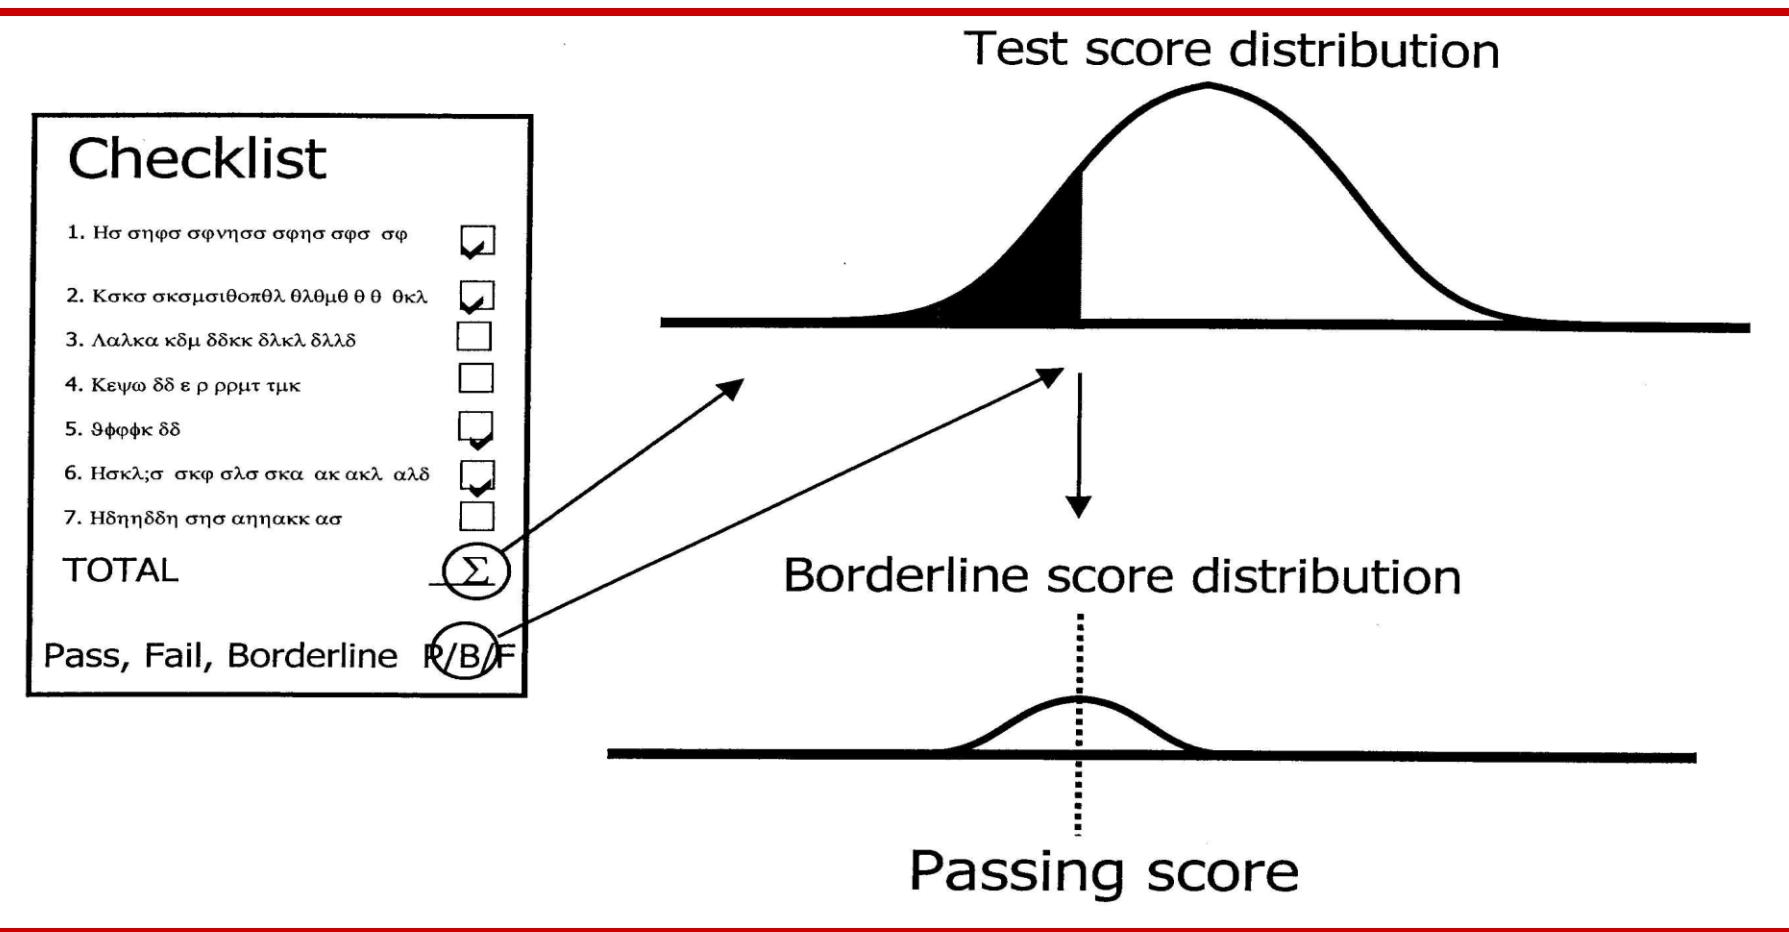

Pre-OSCE quality assurance

holistic method

Test score distribution

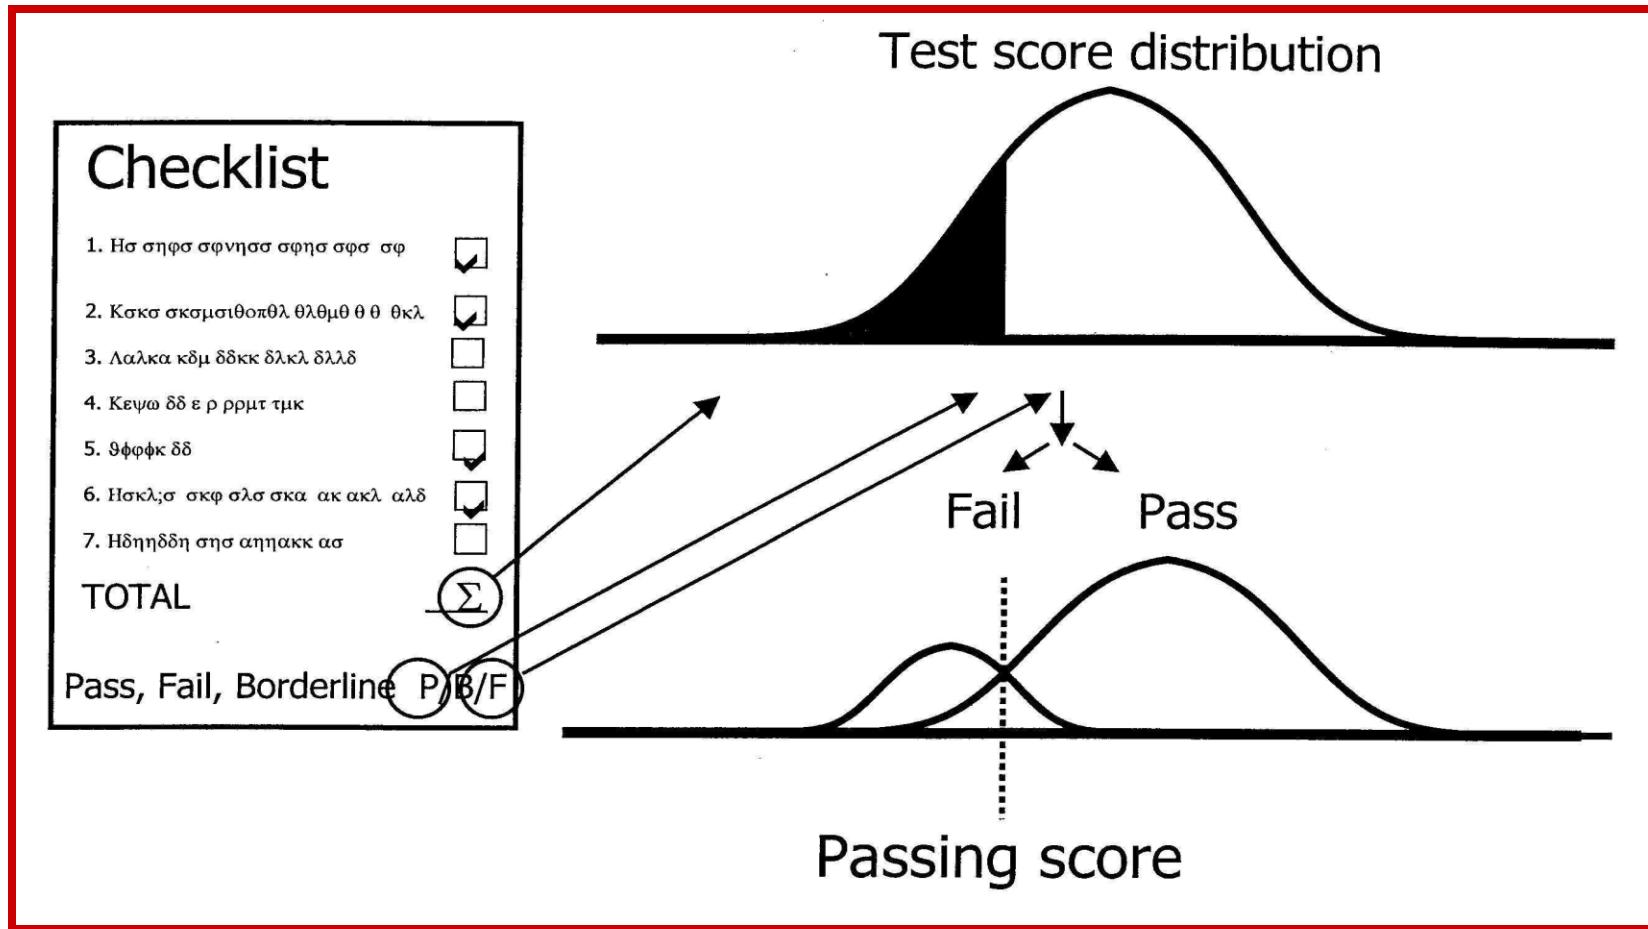

Pre-OSCE quality assurance borderline method

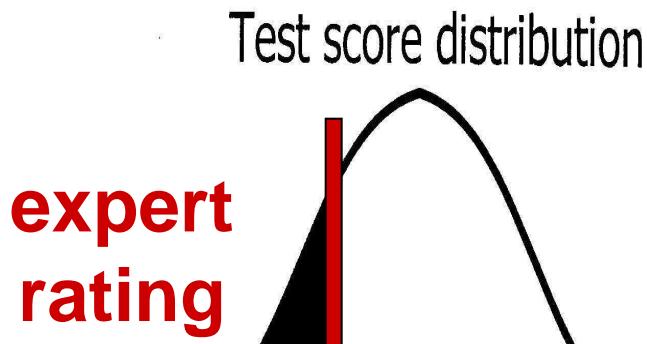

Pre-OSCE quality assurance

contrast method

Pre-OSCE quality assurance

modified Angoff procedure

- expert committee
- discussion about the „borderline-candidate“
- rating of items
- discussion within the expert team about discrepancies

Pre-OSCE quality assurance

rater training

Agenda

- 1) Short communication on OSCE**
 - use of checklists
 - rating
 - prompting
 - feedback
- 2) Video presentation of OSCE station**
- 3) Discussion on named aspects**

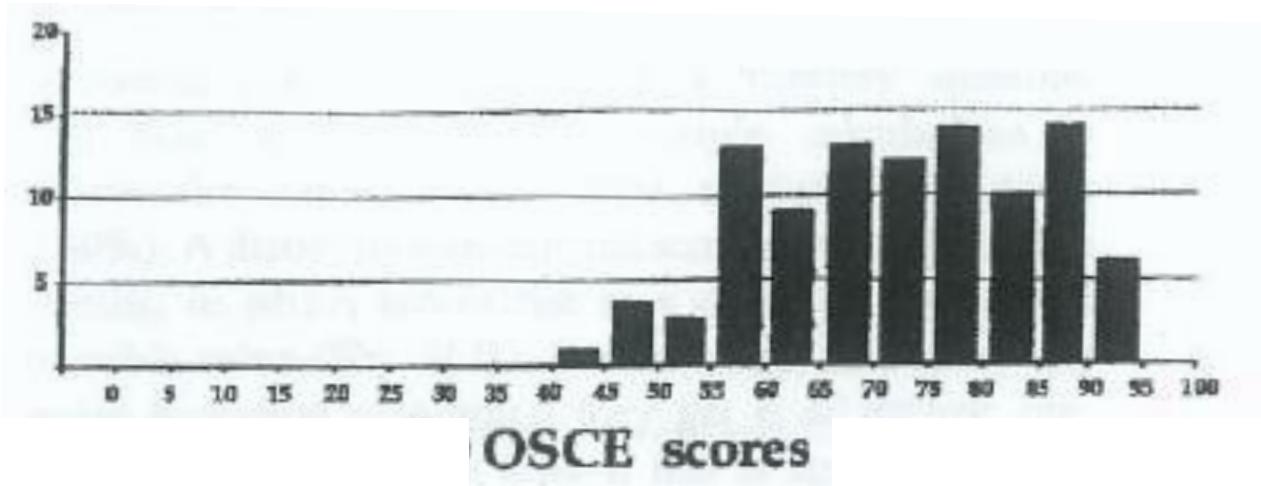

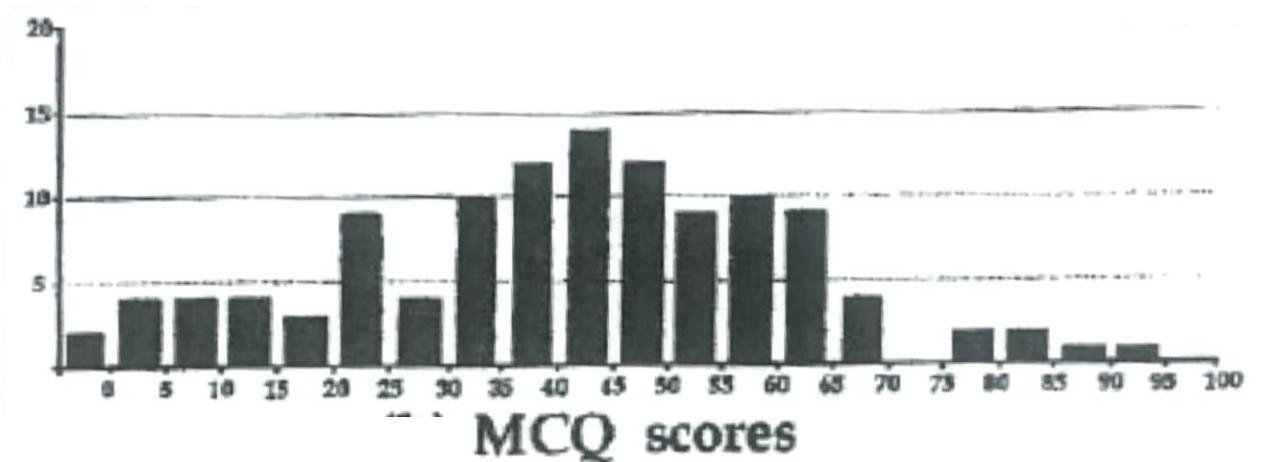

Post-OSCE quality assurance

Post-OSCE quality assurance analyses

	difficulty	selectivity
ECG interpretation	0,817	0,457
endocrinology	0,803	0,390
physical examination	0,932	0,256
communication	0,784	0,324
pulmonology	0,812	0,433
rheumatology	0,904	0,418
general internal medicine	0,742	0,345
nephrology	0,747	0,425
psychosomatics	0,795	0,331
haematology/gastroenterology	0,853	0,273
– lymph nodes	0,885	0,463
– icterus	0,765	0,315
– ulcer	0,800	0,811

Post-OSCE quality assurance score distribution

OSCE – aspects of reliability

Reliabilität

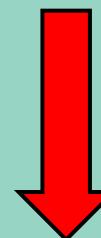

OSCE – aspects of reliability

→ high number of stations

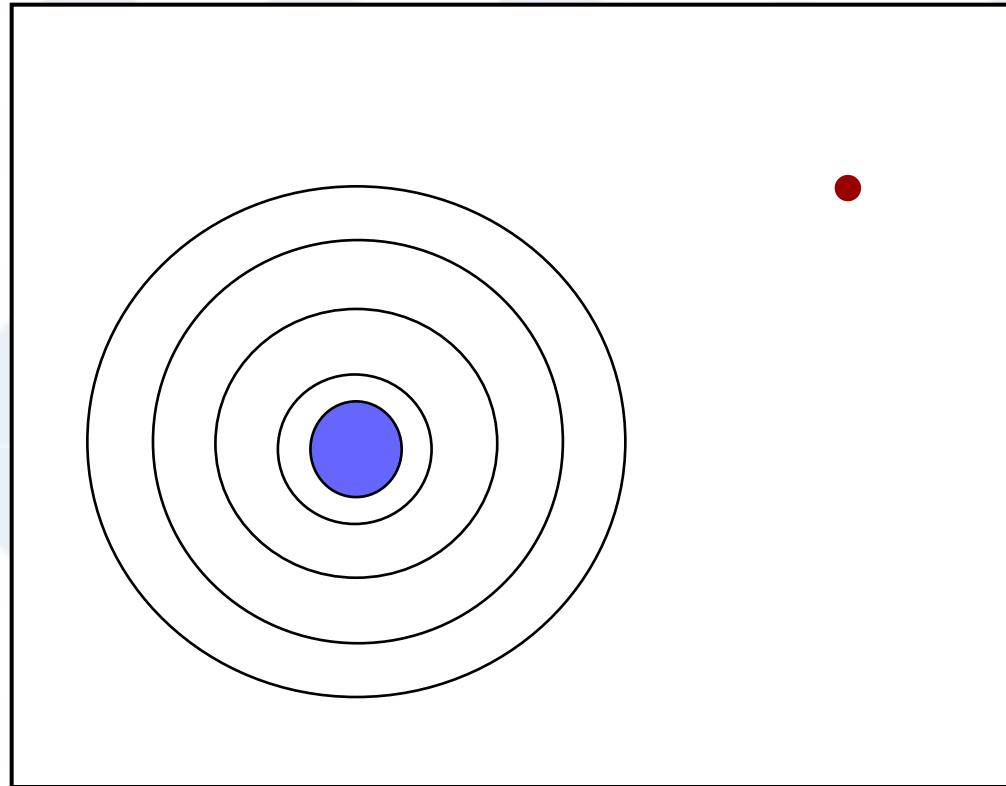

→ pre review of stations

Semester	Reliabilität (Cronbachs α)
Wintersemester 2005/2006	0,772
Sommersemester 2006	0,715
Wintersemester 2006/2007	0,839
Sommersemester 2007	0,829

→ combination of different assessment formats

OSCE – aspects of validity

OSCE – aspects of validity

face / content validity

assessment in simulated „real-life-situation“

→ face validity

OSCE – aspects of validity

face / content validity

assessment in simulated „real-life-situation“

→ face validity

learning goals → assessment goals → blueprint

→ content validity

OSCE – aspects of validity

predictive validity

OSCE predictor for later clinical performance

→ predictive validity

Campos-Outcait & Gordon, Fam Med (1999)
Graham & Anderson, J Dent Educ (2013)

OSCE – aspects of validity

predictive validity

OSCE predictor for later clinical performance

→ predictive validity

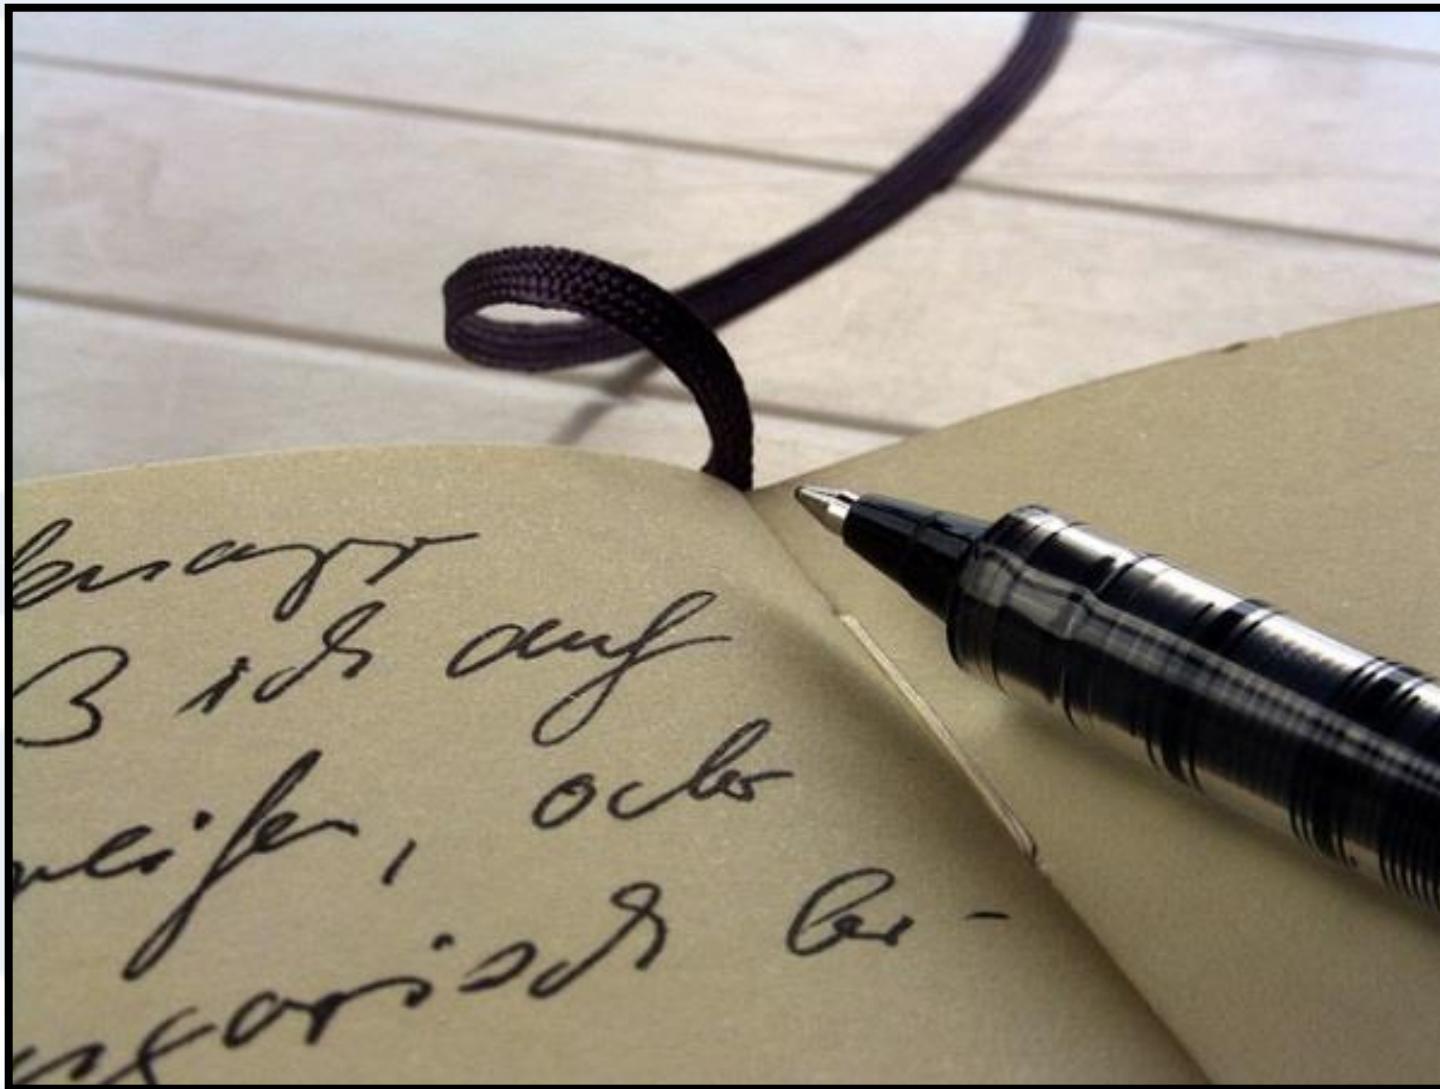

Campos-Outcait & Gordon, Fam Med (1999)
Graham & Anderson, J Dent Educ (2013)

high correlation with assessment of clinical
emplacements, expert ratings and other
rating instruments

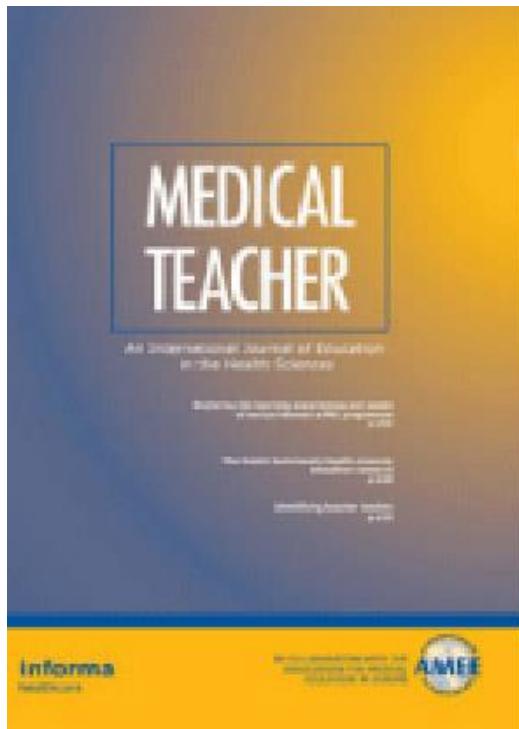

→ concurrent validity

Hodges & McNaughton, Acad Med (1998)
Lieberman & Lang, Acad Radiol (2001)
Scheffer & Ortwein, Adv Health Sci Theory Prac (2007)

OSCE – a tool for research

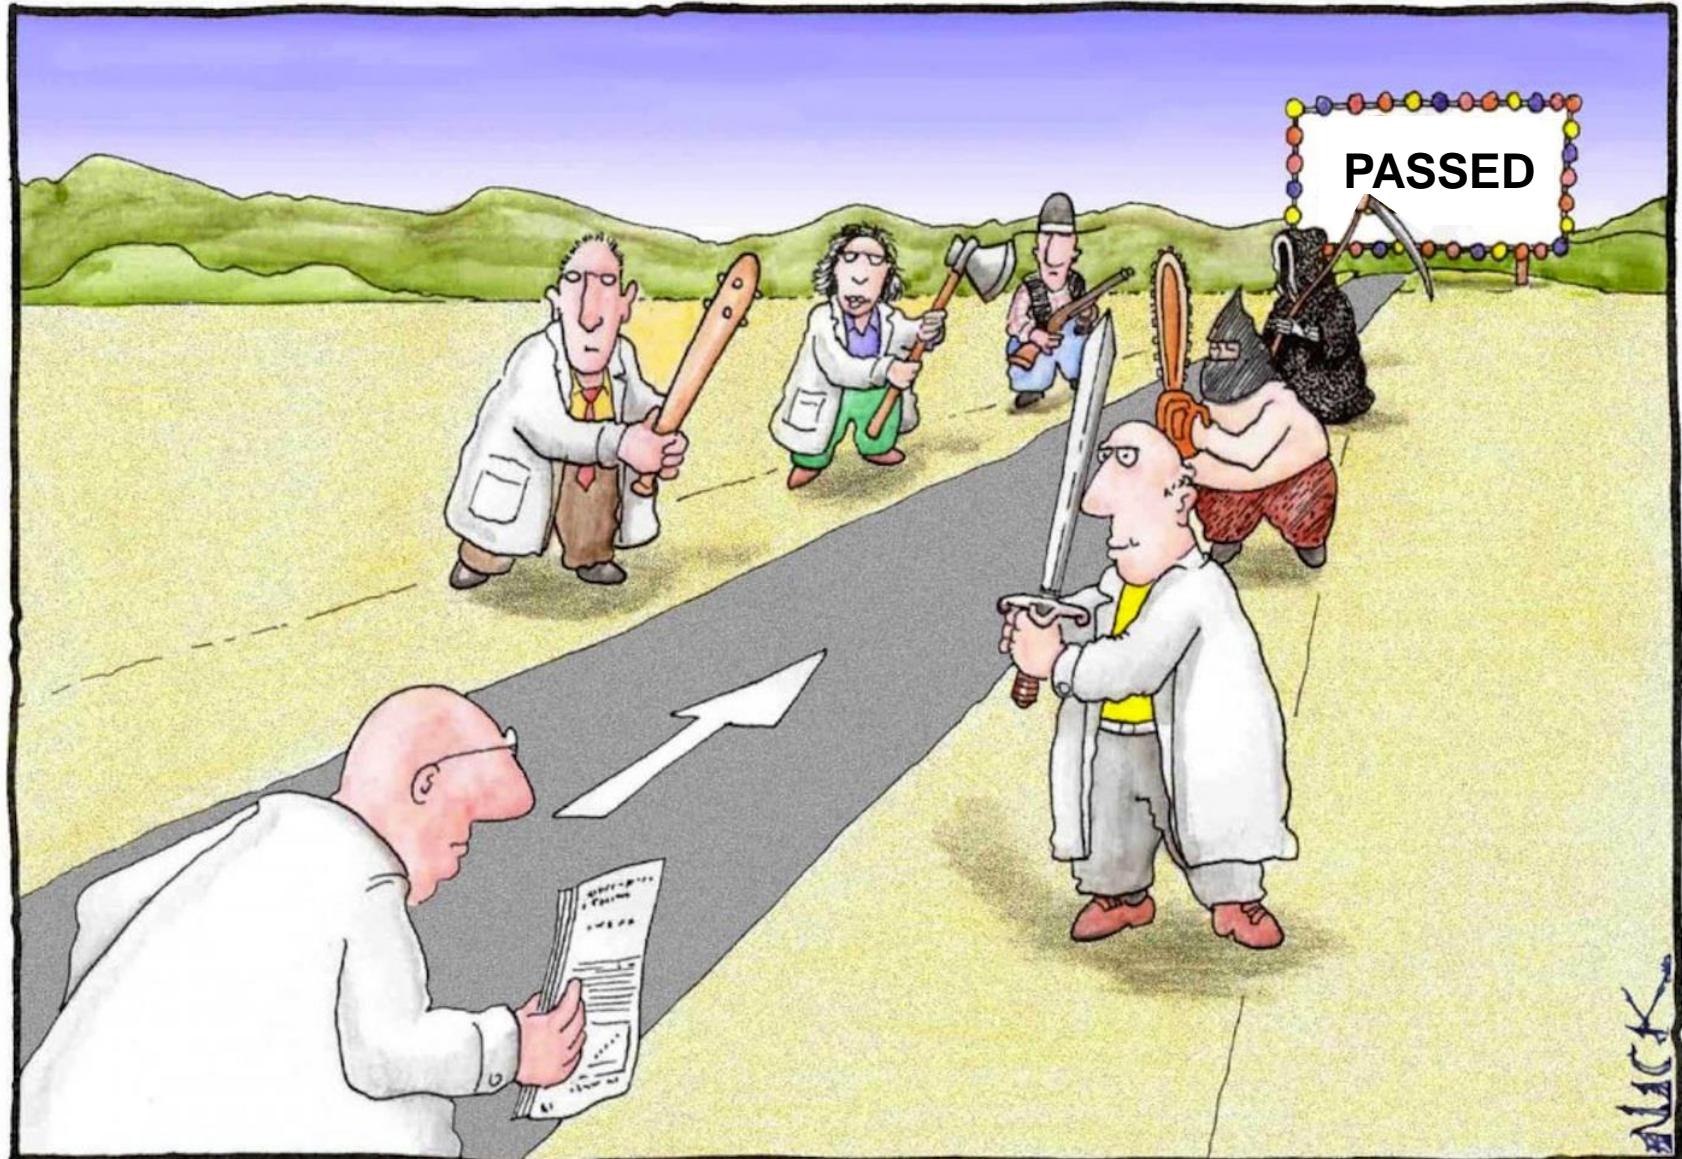

OSCE – a tool for research reporting checklist

**Patrício M, Juliao M, Fareleira F, Young M,
Norman G, Vaz Carneiro A.**
**A comprehensive checklist for reporting the
use of OSCEs.**
Medical Teacher, 2009.

- problem I:** missing data on feasibility, reliability, validity
- problem II:** inconsistent data (lack of standardisation, structure; statistics)

OSCE – future challenges

OSCE – future challenges

**Recommendations and guidelines
for medical assessment**

**Initiatives for assessment guidelines
on European level**

**Item Management Systems (IMS)
providing reviewed checklists**

**International licensing
examination (e.g. USMLE)**

**Interdisciplinary 17 station OSCE
as final state examination since 2001**

**THANK YOU VERY MUCH
FOR YOUR ATTENTION!**
